Mezzanine Storage Solutions

Mezzanine Storage Systems

In the market for a Mezzanine Storage System? Too many times we see warehouses with so much wasted space usually above the racking or shelving system and what we have is fresh air and with so much empty space which is costing money not being utilized and this where a mezzanine storage systems can easily pay for itself.

Increase your cubic space and your storage density with a mezzanine storage system. This is a much less expensive option then purchasing a new building or moving to another location.

Another key element to address is column spans, especially if it's been built over and existing working environment such as a picking area, shelving systems, production lines, or any traffic areas.

We can design our mezzanines to cater to the needs of each existing challenge within the warehouse

Benefits of a Mezzanine

- Allowing you to take full advantage of the air space you already have.
- These units can be free standing therefore not connected to the walls or trusses of the building. They will then covered by different (i.e. easier) building codes.
- Can be considered capital equipment and therefore may qualify for tax write off.
- Can be re-configured as your business needs evolve: reconfigured, expanded or taken down.
- They hold their value and often can be sold if business's requirements change.
- We can design a mezzanine to fit and area that is available
- No additional expenditure in heating your building
- No additional electrical costs
- Installation is quick, clean and easy
- Custom designs fit any existing warehouse layout and budget
- Compatible with a variety of shelving or storage systems
- Mezzanines can be taken down and all the components and be reused in you new location if you move

Applications

- Allowing you to take full advantage of the air space you already have.
- These units can be free standing therefore not connected to the walls or trusses of the building. They will then covered by different (i.e. easier) building codes.
- Can be considered capital equipment and therefore may qualify for tax write off.
- Can be re-configured as your business needs evolve: reconfigured, expanded or taken down.
- They hold their value and often can be sold if business's requirements change.
- We can design a mezzanine to fit and area that is available
- No additional expenditure in heating your building
- No additional electrical costs
- If dimensions are different they can be easily changed

When designing a Mezzanine, it is important to consider the access-ways, work systems, products, and handling methods in order to plan accurately. Mezzanines may be completely disassembled; the parts re-used; and the structure, dimensions, and location easily modified.

1 Stop will work with you to customize a mezzanine solution with the right flooring and capacity for what will be stored and the required loading.
