MATERIAL HANDLING

Push Back Rack System

Push Back Rack Storage Systems

Push Back Rack Systems use gravity fed telescoping carts to provide high density storage.

As you load the first pallet from the front, it sits on the first cart and then as you load the second pallet it pushes the first pallet behind it back one position. This process continues for up to 6 deep.

When you want to remove a pallet the fork truck driver lifts the pallet off and reverses slowly and the next pallet comes forward and into the forward position.

The front pallet is removed when unloading and the rear pallets automatically come forward to the front picking position. This is considered a LIFO system Last-In-First-Out inventory management.

The carts are low profile which helps in areas with heights restrictions and are all color coded to make it easy for the driver.

Advantages

- Exceptional use of space.
- Allows for both selectivity and dense storage.
- Great aisle selectivity.
- More picking faces with a small number of aisles.
- Available in roll form or structural materials.

Applications

- Inventory with multiple SKU's and multiple Pallets of each SKU.
- LIFO storage (Last In/First Out)
- Can be configured 2 to 6 pallets deep
- Storing up to six pallets of each SKU while maintaining the ability to select one pallet of each SKU.

Considerations

- The impact of time sensitive or dated inventory
- The depth of the system is based on the available space and the quantity/size of the pallets
- The height of the system is limited by the pallet height, building clear height and the maximum lift of the truck
- The product on the pallets must be strapped or stretched wrapped to pallet to safeguard against shifting or spillage
- The product must be positioned square and straight on the pallets to avoid damage to the product

We provide

We provide services such as layout drawings, seismic calculations, signed and sealed calculations, installations and permits if required.

We are one stop shopping for both your racking systems and all of your accessory products for your warehouse.

Who We are

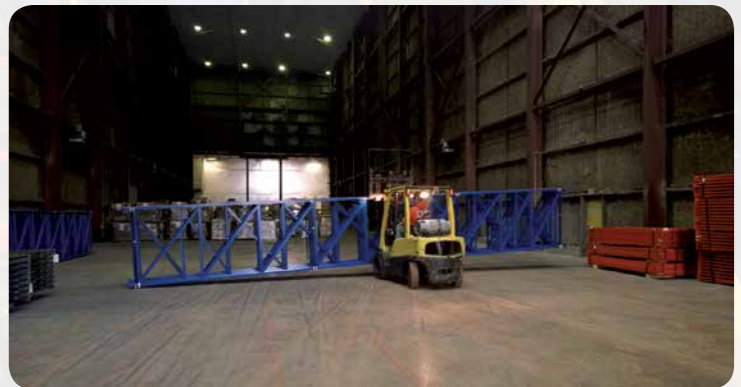

1 Stop Material Handling's expertise lies in system integration for custom design, supply, service and installation. Chances are if you're reading this brochure that you're trying to lift, move, pack or store something.

Our team specializes in the design and implementation of turn-key racking and shelving systems for your warehouse needs.

What We Do

We have 25 years of experience in storage and material handling systems. We will work with you and your team, to design and integrate the most functional, high density and safe storage or rack-ing system to meet your companies needs.
